

Mega Super Seal

PREVENTION. PROTECTION. PEACE OF MIND.

indicative seal

- 1 Mega Super Seal has a unique curved locking system which is different from the other pull tight range. It provides higher locking strength and is highly tamper evident.
- 2 The concept of a step-like locking jaw strap coupled with an internal locking mechanism which is made from stainless steel plate provides greater security.
- 3 Heat staking and ultrasonic technology is applied to permanently bond the top of the chamber and will leave clear marks when tampered.
- 4 The strap holder on the seal chamber is designed for the convenience of storing the excess strap length.
- 5 The cap of the seal is etched with permanent laser marking which offers the highest level of security as it cannot be removed or replaced.
- 6 The Mega Super Seal can be customized with serial number, logo or company name and barcode.

Specifications

Product	Material	Strap Length	Strap Dimensions	Pull Strength	Marking Area	Marking Digits	
Mega Super Seal	Polypropylene with stainless steel spring plate	Locking length : 25 cm	3.3 x 2.5 mm thickness	32 kg	Cap area : 14 x 23 mm	Max 9
