

MF4mm

PREVENTION. PROTECTION. PEACE OF MIND.

Container Security Bolt Lock

Container Security Bolt Lock

The metallic pin and bush of the MF4mm is made of high-carbon steel which gives better strength and added security.

The barrel is made from high impact ABS which is moulded on to the high-carbon steel bush.

The barrel is etched with permanent laser marking for name, logo, sequential numbers and barcode. Laser marking offers the highest level of security as it cannot be removed and replaced.

The MF4mm seal is part of our container seal range. This bolt seal is just 4mm thick, which makes the seal very easy to remove with bolt cutters, especially when multiple seals need to be removed quickly.

Specifications

Material	High-carbon steel pin & bush
Pin Length	72mm
Bolt Diameter	4mm
Pull Strength	<500kg
Marking Area	Barrel: 20 x 7mm

Max Marking Digits	6
Carton quantity	200
Dimensions	300 x 250 x 230mm
Weight kg/carton	6.5kg
Standard colours	White

Container Security Bolt Lock

The MF4mm locking mechanism (the clip), is embedded in a groove in the metal bush, making the seals stronger and more difficult to tamper.

Typical applications of the MF4mm includes shipping and intermodal containers. The MF4mm is also widely used for ground transportation.

Be assured of better security with our innovative use of materials and industrial design.
